

Comprehensive APC Examples

Comprehensive APC without Complexity Adjustment

Case 1: A cardiac patient underwent outpatient surgery including a percutaneous balloon valvuloplasty of the pulmonary valve (92990) and percutaneous transluminal balloon angioplasty involving the pulmonary artery (92997).

Service	Status Indicator ¹	APC ¹	C-APC Ranking ²	Complexity Adjustment ³	Payment
Valvuloplasty (92990)	J1	5193	252	N/A	\$0
Angioplasty (92997)	J1	5193	244	No	\$11,340.57

Explanation: The valvuloplasty (92990) is the highest-ranking C-APC in this case, so the payment for the case will be based on this code. There are no complexity adjustments applicable to 92990.

Comprehensive APC with Complexity Adjustment

Case 2: A cardiac patient underwent femoral popliteal revascularization with stent placement (37226) and a unilateral endovascular revascularization of the iliac artery with transluminal angioplasty (37220).

Service	Status Indicator ¹	APC ¹	C-APC Ranking ²	Complexity Adjustment ³	Payment
Iliac revascularization (37220)	J1	5192	1099	N/A	\$0
Femoral revascularization (37226)	J1	5193	231	Yes /5194	\$17,956.72

Explanation: The femoral revascularization (37226) is the highest-ranking C-APC in this case, so the payment for the case will be based on this code. The iliac revascularization (37220) is listed as a secondary code causing a complexity adjustment from C-APC 5193 "Level 3 Endovascular Procedure" to C-APC 5194 "Level 4 Endovascular Procedure".
